

Aleksandr Detushev

I design and ship **systems, content, balance, and tools** for long-running online games. I currently lead a team of three while staying hands-on from the first design question through live iteration.

years in live game development	playable classes designed and shipped	classes in the live balance roster	game designers led and mentored

PROFILE

Broad by practice

Lead Game Designer with 8+ years on Warspear Online, an 18-year live-service MMORPG with 10M+ Google Play downloads. My work spans systems, progression, economy, PvE and PvP, encounters, live content, analytics requirements, internal tools, and team leadership.

I work directly with engineers, artists, UI/UX, product, QA, and other leads. I am comfortable owning a feature end to end: defining the player and product problem, making the design concrete, supporting implementation, and responding to what happens after release.

2017 TO PRESENT

Experience

Aigrind Warspear Online 2022 to present	Lead Game Designer - Lead and mentor three game designers, set priorities, review work, and keep ownership clear across live releases. - Own design direction across class balance, raids, progression, PvE/PvP systems, seasonal content, and internal tools while remaining hands-on. - Lead balance work across the 20-class roster, setting direction and reviewing the rebalances produced by my team. - Conceived and designed the competitive guild raid system, then led its encounters, seasonal iterations, difficulty progression, and delivery personally or through my team. - Work directly with engineering, art, UI/UX, product, QA, and other leads from concept and specification through implementation and live iteration. - Improved editors, validation, review practices, and telemetry requirements so designers can ship and evaluate complex content more reliably.
--	--

Aigrind Warspear Online 2019 to 2022	Senior Game Designer - Designed and shipped four playable classes end to end: Templar, Chieftain, Beastmaster, and Reaper. The official 2022 annual report recorded 147,776 Reapers and 84,861 Beastmasters created. - Rebuilt the Talent system into a core progression layer with class trees, multiple progression sources, daily caps, and talents that change skill behavior. - Led large class rebalances and used player feedback plus available usage and economy data to adjust the meta without ignoring existing player investment. - Designed new reporting and telemetry requirements for live systems, including event participation, dungeon room completion, completion time, failure rate, and class-level breakdowns.
---	--

Aigrind Warspear Online 2017 to 2019	Game Designer ● Designed and shipped seasonal events, dungeons, encounters, and repeatable content for a regular live update cadence. ● Reworked dungeon structure and pacing to reduce repetition across recurring yearly content. ● Wrote implementation-ready design documentation and worked closely with programmers and artists under live production deadlines. ● Contributed to editor and content-pipeline improvements that made recurring production faster and less error-prone.

SELECTED WORK

What I own

A compact view of the work most relevant to senior and lead systems-design roles. Full case studies and design reasoning are in the portfolio.

Playable classes and live balance	Four shipped classes with distinct kits and technical requirements, followed by continuing direction across a 20-class live roster and the team member who now executes the current rebalance work.
Progression and guild systems	Class and guild talent trees, knowledge-based progression, daily caps, build choices, and three parallel non-combat guild loops built for long-term participation.
Competitive guild raids	Conceived the system and its competitive format, then led encounter design, seasonal iterations, difficulty progression, and delivery personally or through my team.
PvE, PvP, and hybrid content	Seasonal dungeons, world bosses, guild events, arena and GvG work, plus Catacombs: a session-based PvPvE extraction mode with risk, loss, and timed escape.
Design tools and telemetry	Monster, dungeon, quest, talent, and link-editor improvements; reporting specifications for completion, failure, time, reward distribution, class segments, and live-event participation.

CAPABILITIES

My strongest fit is a role where system thinking, practical production work, and communication across disciplines all matter.

Systems design

Economy and rewards

Live Ops

Cross-functional delivery

Feature ownership

PvE and encounter design

Telemetry requirements

Documentation and review

Class design and balance

PvP and competitive systems

Internal design tools

Progression

TOOLS

Confluence, Google Sheets, Figma, Redmine, MySQL Workbench, TortoiseSVN, Unity for prototypes

LANGUAGES

Russian: native

English: strong reading and listening comprehension; improving written English

Education	Saint Petersburg State University of Aerospace Instrumentation (SUAI), Computer Science, unfinished degree
